

DOSSIE FORENSE - RM6 / Messenger Delta - Ticket #18969
Data da auditoria: 05/07/2026 01:46-01:55 (UTC-3)
Conta: Fernando Lourenco
account_login: cuiaba-1782677786967
thread_key: 3079175002273787
server_id: aba80611-8b8a-46ed-a852-f5f0d573c03b

=====

1) RESUMO EXECUTIVO

=====

Diagnostico fechado:

- O CT recebeu e persistiu as 3 mensagens no md_outbox (status=received_by_edge).
- O Edge recebeu via command bus, enfileirou no worker e enviou no Facebook.
- O gargalo final esta no callback de confirmacao (balão azul): POST para <https://convenientetecnologia.com/api/attendance/confirm-delivery> retornou HTTP 404 em todas as 3 mensagens.

Impacto direto:

- Mensagens ficam com "received_by_edge" e nao sobem para "sent_to_facebook"/azul no dashboard.
- Nao houve evidência de travamento global de fila neste lote; houve processamento serial normal.

=====

2) EVIDENCIA SQL (CT - attendance.sqlite)

=====

Tabela: messenger_delta_outbox (ticket_id=18969, janela do teste)

1) id=local:18969:1783226512928

text="sim tste"
status=received_by_edge
created_at=1783226514398 (05/07/2026 01:41:54.398)
updated_at=1783226514927 (05/07/2026 01:41:54.927)
edge_received_at=1783226514927
facebook_sent_at=null
last_error=null

2) id=local:18969:1783226514230

text="ve se foi"
status=received_by_edge
created_at=1783226515829 (05/07/2026 01:41:55.829)
updated_at=1783226516390 (05/07/2026 01:41:56.390)
edge_received_at=1783226516390
facebook_sent_at=null
last_error=null

3) id=local:18969:1783226515278

text="ou nao"
status=received_by_edge
created_at=1783226517296 (05/07/2026 01:41:57.296)
updated_at=1783226517861 (05/07/2026 01:41:57.861)
edge_received_at=1783226517861

facebook_sent_at=null
last_error=null

Ticket events (ticket_event_log):

- messenger_delta_delivery_update / actor_ref=md_outbox
payload status=received_by_edge para os 3 client_message_id acima.

Conclusao SQL:

- Banco confirma recepcao pelo servidor (2 risquinhos), mas sem confirmacao final facebook_sent_at.

=====

3) EVIDENCIA FORENSE EDGE (API /api/infra/forensic-logs)

=====

Fonte:

- GET /api/infra/forensic-logs?account=cuiaba-1782677786967

Pipeline IPC + fila serial:

- reverse_command_bus delta_reply_received cmd_id=local:18969:1783226512928
- reverse_command_bus ipc_dispatch_attempt cmd_id=local:18969:1783226512928
- reverse_command_bus ipc_dispatch_ok cmd_id=local:18969:1783226512928
- queue_task_received client_message_id=local:18969:1783226512928 queue_depth=0

- reverse_command_bus delta_reply_received cmd_id=local:18969:1783226514230
- reverse_command_bus ipc_dispatch_ok cmd_id=local:18969:1783226514230
- queue_task_received client_message_id=local:18969:1783226514230 queue_depth=1

- reverse_command_bus delta_reply_received cmd_id=local:18969:1783226515278
- reverse_command_bus ipc_dispatch_ok cmd_id=local:18969:1783226515278
- queue_task_received client_message_id=local:18969:1783226515278 queue_depth=2

Sinais de envio no Facebook (sem erro de composer no lote):

- marketplace_filter_bypass reason=thread_already_open_url
- browser_window_state_check ... is_already_open=true ... skipped_click=true
- composer_focus_lifecycle phase=found/after_click (3 ciclos)

Falha final do callback (causa-raiz):

- confirm_delivery_post_attempt url=https://convenientetecnologia.com/api/attendance/confirm-delivery
- confirm_delivery_fail status=404 error=http_404 client_message_id=local:18969:1783226512928
- confirm_delivery_dead_letter http_status=404 client_message_id=local:18969:1783226512928
- confirm_delivery_fail status=404 error=http_404 client_message_id=local:18969:1783226514230
- confirm_delivery_fail status=404 error=http_404 client_message_id=local:18969:1783226515278

Conclusao forense:

- A trilha confirma que a mensagem sai da fila e chega ate etapa de callback.
- O endpoint de callback no dominio raiz responde 404 e impede o "balão azul".

=====

4) ALTERACOES APLICADAS NESTA INTERVENCAO

=====

A) C:\conveniente\scripts\virtusDelta.js

- Refatorado openThreadByClick(thread_key):
- Seletor estrutural principal fixo:
div[role="row"] a[href*="/messages/t/<thread_key>"]
- Busca com waitForSelector (timeout controlado) no seletor principal.
- Clique humano por coordenada central da bounding box (page.mouse.click).
- Fallback para element.click apenas quando nao houver bounding box.
- Mantida guarda de hidratacao do composer lexical.

B) C:\sitechatbot\index.js

- Expostos no dominio raiz e encaminhados por offload interno:
 - POST /api/attendance/confirm-delivery
 - POST /api/attendance/reverse-delivery-status
- Objetivo: eliminar 404 no callback quando Edge aponta para [https://convenientetecnologia.com/api/attendance/...](https://convenientetecnologia.com/api/attendance/)

C) C:\conveniente\scripts\virtusDelta.js (hardening de callback)

- Mantida URL principal rigida do callback no dominio raiz.
- Adicionado reroute automatico somente quando houver HTTP 404:
 - confirm-delivery: fallback para <https://atendimentos.convenientetecnologia.com/api/attendance/confirm-delivery>
 - reverse-delivery-status: fallback para <https://atendimentos.convenientetecnologia.com/api/attendance/reverse-delivery-status>
- Objetivo: evitar dead-letter por erro de roteamento externo sem travar fila.

Validacoes locais:

- node --check C:\conveniente\scripts\virtusDelta.js OK
- node --check C:\sitechatbot\index.js OK
- ReadLints sem erros nos arquivos alterados

5) CONCLUSAO OPERACIONAL

Estado fechado desta janela (antes do patch entrar em execucao):

1. "1 risquinho" (persistencia CT) = OK
2. "2 risquinhos" (received_by_edge) = OK
3. "azul" (confirm-delivery) = QUEBRADO por HTTP 404 no dominio raiz

Risco residual:

- Ate reiniciar/recarregar os processos com codigo novo (Edge e CT raiz), o callback pode continuar batendo em 404.

Acao recomendada imediata:

- Reiniciar C:\sitechatbot\index.js para publicar as duas rotas no dominio raiz.
- Reiniciar os workers/servico do Edge (C:\conveniente) para ativar o fallback automatico para atendimentos.convenientetecnologia.com em caso de 404.

FIM DO DOSSIE
